

CoderWiki: Page Titles

To return to the Wiki Tech Notes index, [click here](#).

Page titles:

This DokuWiki handles page titles, both in the browser title bar and in the page content, as follows:

1) Added the plugin "pagetitle".

2) Required setting:

```
In "conf/dokuwiki.php":
$conf['useheading'] = 'navigation';
```

3) Required CSS code:

```
In "conf/userstyle.css":

.dokuwiki h1.pagetitle {
    color          : #ffd722 ;
    font-size      : 22pt    ;
    margin-bottom  : 24pt    ;
    text-align     : center  ;
}
```

4) Add a line similar to the following at the top of each normal content page:

```
<title>Put a short title here</title>
```

Note: Titles should be kept reasonably short as they take up space in the breadcrumbs list as well as in the title bar.
